Cellular respiration is a set of metabolic reactions and processes that take place in the cells of organisms to convert biochemical energy from nutrients into adenosine triphosphate (ATP), and then release waste products. The reactions involved in respiration are catabolic reactions, which break large molecules into smaller ones, releasing energy in the process, as weak so-called "high-energy ...

Jyoti "Reducing the resources necessary to produce value is the ultimate goal of kaizen. The takt time / cycle time calculation tells you what you MUST have to do the job as it is currently done. If you don't like what the math tells you, then set a target objective (what cycle time do you NEED?) then apply kaizen / problem solving to hit that target.
