Concrete, usually Portland cement concrete, is a composite material composed of fine and coarse aggregate bonded together with a fluid cement (cement paste) that hardens over time—most frequently a lime-based cement binder, such as Portland cement, but sometimes with other hydraulic cements, such as a calcium aluminate cement. It is distinguished from other, non-cementitious types of concrete ...

The purpose of this study is to experimentally correlate the compressive strength (f_c) of concrete to the modulus of rupture (f_r) for plain concrete beams with a vertical construction joint placed at their center. The ACI code provides a formula for the correlation of f_r to f_c , but with the provision that the concrete specimen is monolithic (no joints).
