Digital audio page. General information. Digital audio is the most commonly used method to represent sound inside a computer, many audio processing device and modern audio storage devices (like CD, MD, DVD). Digital audio technology is a method of representing audio signal using binary numbers. An analog audio signal is converted to digital by the use of an analog-to-digital (A/D) converter chip ...

This is a shifted version of [0 1]. On the time side we get [0.7 - 0.7] instead of [1 -1], because our cycle isn't exactly lined up with our measuring intervals, which are still at the halfway point (this could be desired!). The Fourier Transform finds the set of cycle speeds, amplitudes and phases to match any time signal.

In radio and telecommunications a dipole antenna or doublet is the simplest and most widely used class of antenna. The dipole is any one of a class of antennas producing a radiation pattern approximating that of an elementary electric dipole with a radiating structure supporting a line current so energized that the current has only one node at each end.

Synthetic-aperture radar (SAR) is a form of radar that is used to create two-dimensional images or three-dimensional reconstructions of objects, such as landscapes. SAR uses the motion of the radar antenna over a target region to provide finer spatial resolution than conventional beam-scanning radars.
