A horn loudspeaker is a loudspeaker or loudspeaker element which uses an acoustic horn to increase the overall efficiency of the driving element(s). A common form (right) consists of a compression driver which produces sound waves with a small metal diaphragm vibrated by an electromagnet, attached to a horn, a flaring duct to conduct the sound waves to the open air.

In geometry, a paraboloid is a quadric surface that has (exactly) one axis of symmetry and no center of symmetry. The term "paraboloid" is derived from parabola, which refers to a conic section that has the same property of symmetry.. There are two types of paraboloid, elliptic and hyperbolic, depending on the nature of the planar cross sections: a paraboloid is elliptic if the cross sections ...

This note provides an introduction to the mechanics of solids with applications to science and engineering.  
Itemphasize the three essential features of all mechanics analyses, namely: (a) the geometry of the motion  
and/or deformation of the structure, and conditions of geometric fit, (b) the forces on and within structures and  
assemblages; and (c) the physical aspects of the structural system ...

An ellipse is a curve that is the locus of all points in the plane the sum of whose distances  $r_1$  and  $r_2$  from  
two fixed points  $F_1$  and  $F_2$  (the foci) separated by a distance of  $2c$  is a given positive constant  $2a$  (Hilbert  
and Cohn-Vossen 1999, p. 2). This results in the two-center bipolar coordinate equation  $r_1+r_2=2a$ , (1)  
where  $a$  is the semimajor axis and the origin of the coordinate system ...
