Nearly everyone involved in the operation of boilers, from the operator to the owner, realizes the considerable expense of operating steam generators and associated auxiliary equipment.

Developed by The American Society of Power Engineers (ASOPEâ„¸)

Boiler design is the process of designing boilers used for various purposes. The main function of a boiler is to heat water to generate steam. Steam produced in a boiler can be used for a variety of purposes including space heating, sterilisation, drying, humidification and power generation.The temperature or condition of steam required for these applications is different, so boiler designs ...
