Decision model for overview checking of engineering

recently A. Lieberman issued a set of tables [2] which are an extension of Bowker's tables in that they can be used when s is computed from samples other than n . Resnikoff (33) and JMitra (14) computed values of K when s is estimated by the average range of subgroups. Tables of ...

TO - Defense Technical Information Center

Analysis of variance (ANOVA) allows one to compare the means of $\mu_1, \mu_2, \dots, \mu_m$ of m populations. For a randomized block single-factor design of experiments with m treatments, the analyst uses ANOVA to test the null hypothesis $H_0: \{\mu_1 = \mu_2 = \dots = \mu_m\}$. If H_0 is rejected, the Tukey-Kramer procedure may be used to determine which pairs of means have statistically significant differences.

Robustness of the ANOVA and Tukey-Kramer statistical tests
