Climate change threatens human health and well-being in many ways, including impacts from increased extreme weather events, wildfire, decreased air quality, and illnesses transmitted by food, water, and diseases carriers such as mosquitoes and ticks.

Human Health | National Climate Assessment

Methane (US: / ɛˈ m ɛɪ ŋ, eɪˈ n / or UK: / ɛˈ m iː• ŋ, eɪˈ n /) is a chemical compound with the chemical formula CH₄ (one atom of carbon and four atoms of hydrogen). It is a group-14 hydride and the simplest alkane, and is the main constituent of natural gas. The relative abundance of methane on Earth makes it an attractive fuel, though capturing and storing it poses challenges due to its ...

Biology is the natural science that studies life and living organisms, including their physical structure, chemical processes, molecular interactions, physiological mechanisms, development and evolution. Despite the complexity of the science, there are certain unifying concepts that consolidate it into a single, coherent field. Biology recognizes the cell as the basic unit of life, genes as ...

5 SEVENTH EORIES OF CLIMATE CHANGE gists studying the effect of higher levels of CO₂ on plants or of physicists measuring the amount of energy leaving Earth’s atmosphere.

EVEN THEORIES OF CLIMATE CHANGE

Given EPA’s current estimates of CH₄ leakage from natural gas production and delivery infrastructure, in addition to a modest CH₄ contribution from the vehicle itself (for which few empirical data are available), CNG-fueled vehicles are not a viable mitigation strategy for climate change. Converting a fleet of gasoline cars to CNG increases radiative forcing for 80 yr before any net ...

Greater focus needed on methane leakage from natural gas

Observed Climate Change. Temperatures increased across the region from 1895 to 2011, with a regionally averaged warming of about 1.3°F. While precipitation has generally increased, trends are small as compared to natural variability. Both increasing and decreasing trends are observed among various locations, seasons, and time periods of analysis (Ch. 2: Our Changing Climate, Figure 2.12).

Northwest | National Climate Assessment

1. INTRODUCTION - OVERVIEW - Biology as a science deals with the origin, history, process, and physical characteristics, of plants and animals: it includes botany, and zoology. A study of biology includes the study of the chemical basis of living organisms, DNA. Other related sciences include microbiology and organic chemistry.

Most nations recently agreed to hold global average temperature rise to well below 2 °C. We examine how much climate mitigation nature can contribute to this goal with a comprehensive analysis of "natural climate solutions" (NCS): 20 conservation, restoration, and/or improved land management actions that increase carbon storage and/or avoid greenhouse gas emissions across global forests ...

One-Hundred-and-Twenty-Sixth Annual Undergraduate Bulletin 2017-18 The Undergraduate Bulletin is also available on the Web at <http://bulletin.uncg.edu>.

One-Hundred-and-Twenty-Sixth Annual Undergraduate Bulletin

A number of authors, including the IPCC, have argued that climate models have systematically overstated the rate of global warming in recent decades. A recent paper by Millar et al. (2017) presented the same finding in a diagram of temperature change versus cumulative carbon emissions since 1870 ...
