The calibration of a soil sample is presented as a case study to illustrate the applicability of the method when the soil response lies within the linear elastic domain. Calibration results show a probabilistic description of the spatially distributed parameters and of the coefficients of the chaos representation that defines it.

How could the abstract be improved? The first and most important requirement is to have a good understanding of the subject matter and the aims of the experiment. Note that the purpose of these tests is primarily to demonstrate how abstract theory actually works and this is not really addressed in the example abstract. Language has to be more precise.
