The subsurface ground consists of a top silty sand layer which extends from the natural ground surface to a maximum depth of 5-m. This layer is underlain by weak sandstone and very dense sand with cemented bands and lumps which extend to the end of drilling, located 40 m below the natural ground surface. The Standard Penetration Test (SPT) was performed in the sand layers at 1-m intervals.

9.SHOP PRACTICES. Knowing about good electronic shop practices begins with introduction to the basic tools and test instruments used in electronic repair, production and troubleshooting. It continues with "hands-on" activity directed towards learning practical skills such as soldering and de-soldering and making connecting leads and cables.
