

### **differentiation of trigonometric functions pdf**

The differentiation of trigonometric functions is the mathematical process of finding the derivative of a trigonometric function, or its rate of change with respect to a variable. Common trigonometric functions include  $\sin(x)$ ,  $\cos(x)$  and  $\tan(x)$ . For example, the derivative of  $f(x) = \sin(x)$  is represented as  $f'(a) = \cos(a)$ .  $f'(a)$  is the rate of change of  $\sin(x)$  at a particular point  $a$ .

### **Differentiation of trigonometric functions - Wikipedia**

In mathematics, the trigonometric functions (also called circular functions, angle functions or goniometric functions) are functions of an angle. They relate the angles of a triangle to the lengths of its sides. Trigonometric functions are important in the study of triangles and modeling periodic phenomena, among many other applications.

In this section we will give a quick review of trig functions. We will cover the basic notation, relationship between the trig functions, the right triangle definition of the trig functions. We will also cover evaluation of trig functions as well as the unit circle (one of the most important ideas from a trig class!) and how it can be used to evaluate trig functions.
