Tissue engineering is the use of a combination of cells, engineering and materials methods, and suitable biochemical and physicochemical factors to improve or replace biological tissues. Tissue engineering involves the use of a tissue scaffold for the formation of new viable tissue for a medical purpose. While it was once categorized as a sub-field of biomaterials, having grown in scope and ...

Great story, Mark. I arrived at the conclusion that Intel's switch to cobalt is premature (among other things) independently, without contacting people involved, and before Intel's IITC paper and recent publications from Applied Materials became available, which, along with your article is a great proof of my previously published analysis.
