Fluid mechanics is the branch of physics concerned with the mechanics of fluids (liquids, gases, and plasmas) and the forces on them. Fluid mechanics has a wide range of applications, including mechanical engineering, civil engineering, chemical engineering, biomedical engineering, geophysics, astrophysics, and biology. Fluid mechanics can be divided into fluid statics, the study of fluids at ...

In fluid dynamics, a stall is a reduction in the lift coefficient generated by a foil as angle of attack increases. This occurs when the critical angle of attack of the foil is exceeded. The critical angle of attack is typically about 15 degrees, but it may vary significantly depending on the fluid, foil, and Reynolds number.. Stalls in fixed-wing flight are often experienced as a sudden ...

2013 August 3, "Boundary problems", in The Economist, volume 408, number 8847: Economics is a messy discipline: too fluid to be a science, too rigorous to be an art. Perhaps it is fitting that economists'™ most-used metric, gross domestic product (GDP), is a tangle too.

Stress is the force per unit area on a body that tends to cause it to change shape.. Stress is a measure of the internal forces in a body between its particles. These internal forces are a reaction to the external forces applied on the body that cause it to separate, compress or slide. External forces are either surface forces or body forces. Stress is the average force per unit area that a ...

As you know, the CFEMA has been working on a standard vehicle inspection form. We felt that due to some unfortunate incidents throughout the country with apparatus, that a standard, simple form, to be used by the drivers, similar to one used by truck drivers in the private sector, can be used to catch possible problems with apparatus before a serious problem occurs.
