DNA repair is a collection of processes by which a cell identifies and corrects damage to the DNA molecules

that encode its genome. In human cells, both normal metabolic activities and environmental factors such as radiation can cause DNA damage, resulting in as many as 1 million individual molecular lesions per cell per day. Many of these lesions cause structural damage to the DNA molecule and ...

A transformer is a static electrical device that transfers electrical energy between two or more circuits. A varying current in one coil of the transformer produces a varying magnetic field, which in turn induces a varying electromotive force (emf) or "voltage" across a second coil. Electric power can be transferred between the two coils, without a metallic connection between the two circuits.
