Mathematics... is the best short description that I have found to describe the work that I do, which mostly pertains to DNA identification, and includes consulting, writing software "DNAVIEW is used by some 100 laboratories, in every continent (except Antarctica) " academic activities in mathematics, biostatistics, and various aspects of population genetics.

Failure rate is the frequency with which an engineered system or component fails, expressed in failures per unit of time. It is often denoted by the Greek letter λ (lambda) and is highly used in reliability engineering.. The failure rate of a system usually depends on time, with the rate varying over the life cycle of the system.

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

The method of least squares is a standard approach in regression analysis to approximate the solution of overdetermined systems, i.e., sets of equations in which there are more equations than unknowns."Least squares" means that the overall solution minimizes the sum of the squares of the residuals made in the results of every single equation.
