Heat capacity or thermal capacity is a measurable physical quantity equal to the ratio of the heat added to (or removed from) an object to the resulting temperature change. The unit of heat capacity is joule per kelvin, or kilogram metre squared per kelvin second squared $\hat{c} \dots \hat{c} \dots$ in the International System of Units ($\hat{c} \dots \hat{c} \dots$). The dimensional form is $L^2 M T^{-2} \hat{c}^{-1}$

Plans for a wide variety of solar space heating projects you can build. Solar space heating can be 25 or more times more cost effective than solar electric (PV) systems, and the systems are excellent DIY projects.

Solar space heating -- active and passive solar projects

A heat pump is a device that transfers heat energy from a source of heat to what is called a heat sink. Heat pumps move thermal energy in the opposite direction of spontaneous heat transfer, by absorbing heat from a cold space and releasing it to a warmer one. A heat pump uses a small amount of external power to accomplish the work of transferring energy from the heat source to the heat sink.
