This WikiProject exists to improve the quality of existing articles related to physics, to create articles to cover a broader range of physics topics, and to categorize and link them in appropriate ways. The result of this work should be articles that are accessible to the lay reader and yet are also useful to the professional working in the field.

Heat transfer physics describes the kinetics of energy storage, transport, and energy transformation by principal energy carriers: phonons (lattice vibration waves), electrons, fluid particles, and photons. Heat is energy stored in temperature-dependent motion of particles including electrons, atomic nuclei, individual atoms, and molecules. Heat is transferred to and from matter by the ...

A portable source of light probably started with a cave man carrying a burning stick of wood. There have been many portable light sources based on burning something. Once the dry cell battery became available flashlights became more popular than they were when a lead acid or other wet battery was needed.
