An artificial neural network is a network of simple elements called artificial neurons, which receive input, change their internal state (activation) according to that input, and produce output depending on the input and activation.. An artificial neuron mimics the working of a biophysical neuron with inputs and outputs, but is not a biological neuron model.

Artificial neural network - Wikipedia

Often when a new programming language is introduced, there is a debate which starts amongst some of the genius minds in the industry wherein the language is compared with the one already spreading its roots.
