assessment of municipal solid waste leachate pollution on soil and groundwater system at onderstepoort landfill site in pretoria by rudzani tshibalo

ASSESSMENT OF MUNICIPAL SOLID WASTE LEACHATE POLLUTION ON

Mass spectrometry (MS) is an analytical technique that ionizes chemical species and sorts the ions based on their mass-to-charge ratio. In simpler terms, a mass spectrum measures the masses within a sample. Mass spectrometry is used in many different fields and is applied to pure samples as well as complex mixtures.

The GC-MS is composed of two major building blocks: the gas chromatograph and the mass spectrometer. The gas chromatograph utilizes a capillary column which depends on the column's dimensions (length, diameter, film thickness) as well as the phase properties (e.g. 5% phenyl polysiloxane).

Fig. 1(a) shows the voltage profiles of Li/Li-rich cathode half-cells with and without 1% LiDFOB as a salt-type additive during one precycle at 25 °C. Two voltage plateaus are observed near 4.0 and 4.5 V vs. Li/Li⁺, corresponding to the extraction of Li ions from LiNi^{1/3}Co^{1/3}Mn^{1/3}O₂ and the formation of Li₂O and MnO₂ by the electrochemical activation of Li₂MnO₃, respectively.

Mechanisms for electrochemical performance enhancement by

Figure 2. RMF and its effect on the MNPs. (a) Dimensions of the two NdFeB permanent magnets used in the equipment and reference axis. (b) Position of the two magnets in a rotating cylinder in the device and location of the cell-culture dish.

Elongated Nanoparticle Aggregates in Cancer Cells for

Analytical centrifugation (AC) is a powerful technique for the measurement of particle size distributions. This study evaluates its performance for the grouping of particulate materials according to the European Commission's recommendation on the definition of a nanomaterial, which bases on the number-weighted median diameter.

Performance of analytical centrifugation for the particle

le type d'ionisation utilisé, un spectre de masse peut être caractéristique d'une molécule. Ainsi en le comparant avec des banques de spectres, il est possible d'identifier la molécule.

Spectrométrie de masse - Wikipédia

Le spectromètre de masse est un appareil qui permet de mesurer la masse des ions. Il est utilisé pour l'analyse chimique et la biologie. Les ions sont accélérés et passent à travers un champ magnétique qui les sépare en fonction de leur rapport masse/charge. Les ions sont ensuite détectés et leur position est mesurée. Les données sont traitées pour donner la masse des ions. Les spectromètres de masse sont utilisés pour l'analyse chimique et la biologie. Ils permettent de mesurer la masse des ions et de les séparer en fonction de leur rapport masse/charge. Les ions sont accélérés et passent à travers un champ magnétique qui les sépare en fonction de leur rapport masse/charge. Les ions sont ensuite détectés et leur position est mesurée. Les données sont traitées pour donner la masse des ions.

Introduction. Obesity is associated with a number of health disorders, including dyslipidemia, diabetes,

cardiovascular disease, gall bladder disease, cerebro-vascular diseases, obstructive sleep apnea, menstrual irregularities and certain types of cancer (Haslam and James 2005 Haslam DW, James WP. 2005. Obesity.
