An internal combustion engine (ICE) is a heat engine where the combustion of a fuel occurs with an oxidizer (usually air) in a combustion chamber that is an integral part of the working fluid flow circuit. In an internal combustion engine, the expansion of the high-temperature and high-pressure gases produced by combustion applies direct force to some component of the engine.

The internal combustion engine is an engine in which the burning of a fuel occurs in a confined space called a combustion chamber. This exothermic reaction of a fuel with an oxidizer creates gases of high temperature and pressure, which are permitted to expand. The defining feature of an internal ...

7 Power Regulation ¶ An IC engine is basically an air engine, the more air you get into the cylinder, the more fuel you can burn, and more the power you get. WOT Idle  $P_{atm} < P_{int}$  Intake manifold Fuel ¶ Vary throttle position -Maximum intake pressure (and power) achieved at wide-open-throttle (WOT), and minimum at idle.
