The "Fed model" is a theory of equity valuation that has found broad application in the investment community. The model compares the stock market's earnings yield (E/P) to the yield on long-term government bonds. In its strongest form the Fed model states that bond and stock market are in equilibrium, and fairly valued, when the one-year forward-looking earnings yield equals the 10-year ...

Stocks with recent past high idiosyncratic volatility have low future average returns around the world. Across 23 developed markets, the difference in average returns between the extreme quintile portfolios sorted on idiosyncratic volatility is -1.31 % per month, after controlling for world market, size, and value factors. The effect is individually significant in each G7 country.

Thanks to the Amazon Effect, fast and free delivery is the new normal, forcing other online sellers to keep up. However, there's one area of e-commerce where online sellers can still compete logistically with Amazon and big box players: delivery of oversized, larger-than-parcel items, such as furniture, sofas, armoires, mattresses, treadmills, and more.
