In programming, algorithms perform specific functions to complete required tasks. Introduction to Algorithms, part of the Foundations of Programming course, will provide you with the fundamentals of using algorithms in programming. Simon also demonstrates the choices developers have of using different algorithms to accomplish the same tasks.

In mathematics and computer science, an algorithm (/ ɛː ˈ ɔː l ɪ ˈ dʒ m / ()) is an unambiguous specification of how to solve a class of problems. Algorithms can perform calculation, data processing, and automated reasoning tasks.. As an effective method, an algorithm can be expressed within a finite amount of space and time and in a well-defined formal language for calculating a function.
