Until 19th century, linear algebra was introduced through systems of linear equations and matrices. In modern mathematics, the presentation through vector spaces is generally preferred, since it is more synthetic, more general (not limited to the finite-dimensional case), and conceptually simpler, although more abstract.. A vector space over a field F (often the field of the real numbers) is a ...

Definition. A matrix is a rectangular array of numbers or other mathematical objects for which operations such as addition and multiplication are defined. Most commonly, a matrix over a field F is a rectangular array of scalars each of which is a member of F. Most of this article focuses on real and complex matrices, that is, matrices whose elements are real numbers or complex numbers ...

I have in previous papers defined a "Matrix" as a rectangular array of terms, out of which different systems of determinants may be engendered as from the womb of a common parent.

En matemática, una matriz es un arreglo bidimensional de números. Dado que puede definirse tanto la suma como el producto de matrices, en mayor generalidad se dice que son elementos de un anillo. Una matriz se representa por medio de una letra mayúscula (A, B...) y sus elementos con la misma letra en minúscula (a, b...), con un doble subíndice donde el primero indica la fila y el segundo la ...
