

linear circuit analysis chua pdf

A memristor (/ ɛˈ m ɛː m r ɛː s t ɛˈ m r /; a portmanteau of memory resistor) is a hypothetical non-linear passive two-terminal electrical component relating electric charge and magnetic flux linkage. It was envisioned, and its name coined, in 1971 by circuit theorist Leon Chua. According to the characterizing mathematical relations, the memristor would hypothetically operate in the following way ...

Memristor - Wikipedia

In reality, all circuit components are non-linear and can only be approximated to linear over a certain range. To more exactly describe the passive elements, their constitutive relation is used instead of simple proportionality. From any two of the circuit variables there are six constitutive relations that can be formed.

Electrical element - Wikipedia

Indexed in SCIE, MathSciNet and Zentralblatt Math. The Journal of Applied Analysis and Computation (JAAC) is aimed to publish original research papers and survey articles on the theory, scientific computation and application of nonlinear analysis, differential equations and dynamical systems including interdisciplinary research topics on dynamics of mathematical models arising from major areas ...

1971. Chua's memristor (i vs v, e vs i) is a two-terminal passive element that obeys the constitutive relation $q = \int i dt = \int v dt$. It is a hypothetical element that has not been realized in a physical form.

A comprehensive overview of through-silicon-via technology (TSV) is presented. TSV technology enables Moore's Law to scale vertically. We explore the challenges associated with running high volume TSV manufacturing.

An overview of through-silicon-via technology and

A seizure detection system must be able to determine the presence or absence of ongoing seizures. A variety of algorithms of different biometric signals can do this even prior to clinical onset of a seizure (). All seizure detection algorithms involve two main steps.

Seizure detection, seizure prediction, and closed-loop
