Pareto efficiency or Pareto optimality is a state of allocation of resources from which it is impossible to reallocate so as to make any one individual or preference criterion better off without making at least one individual or preference criterion worse off. The concept is named after Vilfredo Pareto (1848–1923), Italian engineer and economist, who used the concept in his studies of ...

In economics, an externality is the cost or benefit that affects a party who did not choose to incur that cost or benefit. When there is no externality, allocative efficiency is achieved; however, this rarely happens in the free market. [unreliable source?] [better source needed]. Economists often urge governments to adopt policies that will "internalize" an externality, so that costs and ...
