Pareto efficiency or Pareto optimality is a state of allocation of resources from which it is impossible to reallocate so as to make any one individual or preference criterion better off without making at least one individual or preference criterion worse off. The concept is named after Vilfredo Pareto (1848–1923), Italian engineer and economist, who used the concept in his studies of ...

Pareto efficiency - Wikipedia

In economics, an externality is the cost or benefit that affects a party who did not choose to incur that cost or benefit. When there is no externality, allocative efficiency is achieved; however, this rarely happens in the free market. [unreliable source?] [better source needed]. Economists often urge governments to adopt policies that will "internalize" an externality, so that costs and ...

Externality - Wikipedia

2.2. Method I: Vector Optimisation. The vector optimisation is a multi-objective optimisation approach that implies the independent treatment of the different objectives (Marler and Arora, 2004). Within this article, it refers to the independent optimisation of an environmental and economic indicator to identify Pareto-optimal solutions.

Critical Analysis of Methods for Integrating Economic and

La economía matemática es la aplicación de métodos matemáticos para representar teorías y analizar problemas en la economía. Por convención, los métodos aplicados se refieren a aquellos que van desde la geometría simple, como el cálculo diferencial e integral, ecuaciones diferenciales, álgebra de matrices, programación matemática y otros métodos computacionales.
