Classical mechanics describes the motion of macroscopic objects, from projectiles to parts of machinery, and astronomical objects, such as spacecraft, planets, stars and galaxies.. If the present state of an object is known it is possible to predict by the laws of classical mechanics how it will move in the future (determinism) and how it has moved in the past (reversibility).

Mechanics (Greek $\mu\acute{\epsilon}\chi\alpha\tau\acute{\iota}\kappa\eta$) is that area of science concerned with the behaviour of physical bodies when subjected to forces or displacements, and the subsequent effects of the bodies on their environment. The scientific discipline has its origins in Ancient Greece with the writings of Aristotle and Archimedes (see History of classical mechanics and Timeline of classical mechanics).

Stress is the force per unit area on a body that tends to cause it to change shape.. Stress is a measure of the internal forces in a body between its particles. These internal forces are a reaction to the external forces applied on the body that cause it to separate, compress or slide. External forces are either surface forces or body forces. Stress is the average force per unit area that a ...

As you know, the CFEMA has been working on a standard vehicle inspection form. We felt that due to some unfortunate incidents throughout the country with apparatus, that a standard, simple form, to be used by the drivers, similar to one used by truck drivers in the private sector, can be used to catch possible problems with apparatus before a serious problem occurs.
