Strength of materials, also called mechanics of materials, is a subject which deals with the behavior of solid objects subject to stresses and strains. The complete theory began with the consideration of the behavior of one and two dimensional members of structures, whose states of stress can be approximated as two dimensional, and was then generalized to three dimensions to develop a more ...

Para estudiantes de cursos en Mecánica de Materiales de Ingeniería Mecánica, Civil, o Aeroespacial. Este texto proporciona una presentación clara y completa de la teoría y aplicaciones de la mecánica de materiales. Se examina el comportamiento físico de los materiales bajo carga, y procede a modelar este comportamiento a la teoría del desarrollo.

Friction is the force resisting the relative motion of solid surfaces, fluid layers, and material elements sliding against each other. There are several types of friction: Dry friction is a force that opposes the relative lateral motion of two solid surfaces in contact. Dry friction is subdivided into static friction ("stiction") between non-moving surfaces, and kinetic friction between moving ...

Static friction is the force that resists the relative lateral motion of two solid surfaces in contact. Static friction is subdivided into static friction ("stiction") between non-moving surfaces, and kinetic friction between moving surfaces. The coefficient of static friction is denoted by  $\mu_s$  and the coefficient of kinetic friction is denoted by  $\mu_k$ . The maximum static friction force is given by  $F_{s,max} = \mu_s F_N$ , where  $F_N$  is the normal force. The maximum kinetic friction force is given by  $F_{k,max} = \mu_k F_N$ .
