1. INTRODUCTION - A transistor is a small electronic device that can cause changes in a large electrical output signal by small changes in a small input signal.That is, a weak input signal can be amplified (made stronger) by a transistor. For example, very weak radio signals in the air can be picked up by a wire antenna and processed by transistor amplifiers until they are strong enough to be ...

Full Disclosure - I was given this product for testing and review. First of all, I'm a AV systems designer, installer and company owner. I saw the new system two years ago at Denver AVX and expressed my doubts about it's capabilities to the company rep. Turns out he was the VP of Engineering for AT!
