A transformer is a static electrical device that transfers electrical energy between two or more circuits. A varying current in one coil of the transformer produces a varying magnetic field, which in turn induces a varying electromotive force (emf) or "voltage" across a second coil. Electric power can be transferred between the two coils, without a metallic connection between the two circuits.

In electrical power systems a slack bus (or swing bus), defined as a $V \angle \delta$ bus, is used to balance the active power $|P|$ and reactive power $|Q|$ in a system while performing load flow studies. The slack bus is used to provide for system losses by emitting or absorbing active and/or reactive power to and from the system.

Electrical Engineering deals with the study of electrical, electronics and electromagnetism. Various fields are related to electrical engineering like electrical power, telegraph, and telephone etc. GATE also includes EEE in its syllabus and different question paper will be provided for electronics.
