For 20 years, an experiment in Italy known as DAMA has detected an oscillating signal that could be coming from dark matter – the fog of invisible particles that ostensibly fill the cosmos, sculpting everything else with their gravity.. One of the oldest and biggest experiments hunting for dark matter particles, DAMA is alone in claiming to see them.

The project was born from Zador's™ frustration during his "everyday job" as a neurophysiologist, as he wryly referred to it. He studies auditory decision-making in rodents: how their brain hears sounds, processes the audio information and determines a behavioral output or action.

The photon is a type of elementary particle, the quantum of the electromagnetic field including electromagnetic radiation such as light, and the force carrier for the electromagnetic force (even when static via virtual particles).The photon has zero rest mass and always moves at the speed of light within a vacuum.. Like all elementary particles, photons are currently best explained by quantum ...

The photoelectric effect is the emission of electrons or other free carriers when light shines on a material. Electrons emitted in this manner can be called photo electrons.This phenomenon is commonly studied in electronic physics, as well as in fields of chemistry, such as quantum chemistry or electrochemistry.. According to classical electromagnetic theory, this effect can be attributed to ...

Please (non-physicist) readers, don't take this to mean that light actually has mass or directly interacts with other photons. They created a system that behaves "as if" these things happen.

These operators will "operate" on a wave function, Ψ , which is assumed to exist, and which is assumed to contain all that is knowable about the quantum mechanical system.We would then solve the resulting equation to get the particulars. And so, in this example, we can write the substitutions into the classical expression for total energy.
