Mathematical analysis is the branch of mathematics dealing with limits and related theories, such as differentiation, integration, measure, infinite series, and analytic functions.. These theories are usually studied in the context of real and complex numbers and functions. Analysis evolved from calculus, which involves the elementary concepts and techniques of analysis.

Hi. I'm just finishing Chapter 7 tonight (still 2 more problems). I'll start on Chapter 8 tomorrow. The plan is to average 5 problems per day over the course of each month (if you look at the archives on the side you'll see that each month has 150 or 155 entries), which means I'll finish volume 1 on June 23.

Risk compensation is a theory which suggests that people typically adjust their behavior in response to the perceived level of risk, becoming more careful where they sense greater risk and less careful if they feel more protected. Although usually small in comparison to the fundamental benefits of safety interventions, it may result in a lower net benefit than expected.

1. Introduction. The detection and identification of body fluids at a crime scene are very important aspects of forensic science. Determining whether or not there is a body fluid present and subsequently identifying it allows the sample to undergo further laboratory testing including DNA analysis which is a very crucial step in a wide range of investigations.

This paper reviews the current pathways for recycling of solid plastic waste, via both mechanical and chemical recycling. The predominant industrial technologies, design strategies and recycling examples of specific waste streams are reviewed.

Anecdote: There's this really neat bit in the Feynman lectures where he notices that the ratio between the gravitational and electric forces in an atom is on the order of 10^{-37} , and wonders how a number so large could happen in nature.
