1 REAL ANALYSIS 1 Real Analysis 1.1 1991 November 21 1.(a) Let f nbe a sequence of continuous, real valued functions on [0;1] which converges uniformly to f.Prove that lim n!1f n(x n) = f(1=2) for any sequence fx ngwhich converges to 1=2. (b) Must the conclusion still hold if the convergence is only point-wise?

Problems and Solutions in EAL AND COMPLEX ANALYSIS
In mathematics, a linear map (also called a linear mapping, linear transformation or, in some contexts, linear function) is a mapping V â† W between two modules (including vector spaces) that preserves (in the sense defined below) the operations of addition and scalar multiplication.. An important special case is when V = W, in which case the map is called a linear operator, or an ...

Applications Statistics. In statistics, measures of central tendency and statistical dispersion, such as the mean, median, and standard deviation, are defined in terms of L p metrics, and measures of central tendency can be characterized as solutions to variational problems.. In penalized regression, 'L1 penalty' and 'L2 penalty' refer to penalizing either the L 1 norm of a solution's vector ...

June 23 is the beginning of summer- well timed! I also am looking forward to being finished by about beginning of summer, with the trifecta of calculus books (spivak, courant and apostol; admittingly dependent on your work).

This book introduces students to optimization theory and its use in economics and allied disciplines. The first of its three parts examines the existence of solutions to optimization problems in Rn, and how these solutions may be identified.

We consider the problem of differentiating a function specified by noisy data. Regularizing the differentiation process avoids the noise amplification of finite-difference methods. We use total-variation regularization, which allows for discontinuous solutions. The resulting simple algorithm accurately differentiates noisy functions, including those which have a discontinuous derivative.

In a previous post, the benefits of crowdsourcing were described as follows:. When trying to solve a challenge, what is the probability that any one person will have the best solution for it? Itâ€™s a simple mathematical reality: the odds of any single person providing the top answer are low.
