The architectural diagram shown in Figure 2 depicts an SOA as a set of logical layers. Note that the SOA solution stack is a partially layered architecture. One layer does not solely depend upon the layer below it; for example, a consumer can access the business process layer as a service or the service layer directly, but not beyond the constraints of the SOA architectural style.

A diagram is a symbolic representation of information according to some visualization technique. Diagrams have been used since ancient times, but became more prevalent during the Enlightenment. Sometimes, the technique uses a three-dimensional visualization which is then projected onto a two-dimensional surface. The word graph is sometimes used as a synonym for diagram.

In computer architecture, a branch predictor is a digital circuit that tries to guess which way a branch (e.g. an ifâ€“thenâ€“else structure) will go before this is known definitively. The purpose of the branch predictor is to improve the flow in the instruction pipeline. Branch predictors play a critical role in achieving high effective performance in many modern pipelined microprocessor ...

Event-driven architecture style. 08/30/2018; 3 minutes to read Contributors. In this article. An event-driven architecture consists of event producers that generate a stream of events, and event consumers that listen for the events.. Events are delivered in near real time, so consumers can respond immediately to events as they occur.
