Until 19th century, linear algebra was introduced through systems of linear equations and matrices. In modern mathematics, the presentation through vector spaces is generally preferred, since it is more synthetic, more general (not limited to the finite-dimensional case), and conceptually simpler, although more abstract. A vector space over a field  $F$  (often the field of the real numbers) is a ...

Really nice text on applied linear algebra. There are many examples that involve physical phenomena and interesting applications. However, it also provides the theoretical details necessary to really understand matrix computations at a deeper level.

Linear algebra is a fundamental area of mathematics, and is arguably the most powerful mathematical tool ever developed. It is a core topic of study within fields as diverse as: business, economics, engineering, physics, computer science, ecology, sociology, demography and genetics.

In mathematics, a unimodular matrix  $M$  is a square integer matrix having determinant  $\pm 1$  or  $\hat{=} 1$ . Equivalently, it is an integer matrix that is invertible over the integers: there is an integer matrix  $N$  which is its inverse (these are equivalent under Cramer's rule). Thus every equation  $Mx = b$ , where  $M$  and  $b$  are both integer, and  $M$  is unimodular, has an integer solution.

Hi. I'm just finishing Chapter 7 tonight (still 2 more problems). I'll start on Chapter 8 tomorrow. The plan is to average 5 problems per day over the course of each month (if you look at the archives on the side you'll see that each month has 150 or 155 entries), which means I'll finish volume 1 on June 23.

The area of study known as the history of mathematics is primarily an investigation into the origin of

discoveries in mathematics and, to a lesser extent, an investigation into the standard mathematical methods and notation of the past.. Before the modern age and the worldwide spread of knowledge, written examples of new mathematical developments have come to light only in a few locales.
