Chemical Reaction Stoichiometry (CRS): A Tutorial

When an equation stoichiometry problem involves two gases at the same temperature and pressure, a shortcut can be used. This shortcut employs the coefficients from the balanced equation to create a volume ratio that converts directly from volume of one gas to volume of another.

Stoichiometry / *stōi-ki-ém-ē-tri* / is the calculation of reactants and products in chemical reactions.. Stoichiometry is founded on the law of conservation of mass where the total mass of the reactants equals the total mass of the products, leading to the insight that the relations among quantities of reactants and products typically form a ratio of positive integers.

An equivalent (symbol: equiv) is the amount of a substance that reacts with (or is equivalent to) an arbitrary amount of another substance in a given chemical reaction. It is an archaic unit of measurement that was used in chemistry and the biological sciences in the era before researchers knew how to determine the chemical formula for a compound. The mass of an equivalent is called its ...
