Structural Dynamics, Dynamic Force and Dynamic System Structural Dynamics Conventional structural analysis is based on the concept of statics, which can be derived from Newton's 1st law of motion. This law states that it is necessary for some force to act in order to initiate motion of a body at rest or to change the velocity of a moving body.

INTRODUCTION TO STRUCTURAL DYNAMICS AND AEROELASTICITY

The Aeroelasticity & Structural Design (ASD) group's research examines interactions among aerodynamics, structural mechanics, and dynamics, spanning the fields of fixed- and rotary-winged aircraft as well as spacecraft.

The Structural Dynamics Technical Committee has created a website to educate people, mainly students, on Structural Dynamics and its influence in Aerospace Engineering and get them interested in that field or career. The main target audience is High School Seniors and College Freshman and Sophomore level students.

ignored and the analysis can be simplified as static analysis. Structural dynamics, therefore, is a type of structural analysis which covers the behaviour of structures subjected to dynamic (actions having high acceleration) loading. Dynamic loads include people, wind, waves, traffic, earthquakes, and blasts.
