Introduction- STEAM POWER PLANT: A thermal power station is a power plant in which the prime mover is steam driven. Water is heated, turns into steam and spins a steam turbine which drives an electrical generator. After it passes through the turbine, the steam is condensed in a condenser and recycled to where it was heated; this is known as a Rankine cycle.

The NYOS RS is a paraglider that combines excellent performance with the comfort of a cigar lounge armchair. The high sense of solidity in turbulence transmits great confidence inspiring the desire to continue the flight, while the excellent performance and handling gives the possibility to do so without renouncing anything.
