Modern physics is the post-Newtonian conception of physics. It implies that classical descriptions of phenomena are lacking, and that an accurate, "modern", description of nature requires theories to incorporate elements of quantum mechanics or Einsteinian relativity, or both. In general, the term is used to refer to any branch of physics either developed in the early 20th century and onwards ...

In particle physics, lepton number (historically also called lepton charge) is a conserved quantum number representing the difference between the number of leptons and the number of antileptons in an elementary particle reaction. Lepton number is an additive quantum number, so its sum, not its product, is preserved in interactions. Mathematically, the lepton number is defined by $L = N - \bar{N}$, where ...

Magnetic moment - Wikipedia

The representation of the magnetic moment has changed over time. Before the 1930s, it was represented by two point magnetic masses. It has since been shown that there are no isolated magnetic masses in nature, and that these are therefore purely fictitious.

La equivalencia entre la masa y la energía dada por la expresión de la teoría de la relatividad: = Dicha expresión estuvo sujeta a ciertas interpretaciones, aunque actualmente las consecuencias para la teoría de partículas de dicha ecuación están totalmente claras, y la expresión está bien demostrada desde un punto de vista experimental. ...
