The genetic code is the set of rules used by living cells to translate information encoded within genetic material (DNA or mRNA sequences) into proteins. Translation is accomplished by the ribosome, which links amino acids in an order specified by messenger RNA (mRNA), using transfer RNA (tRNA) molecules to carry amino acids and to read the mRNA three nucleotides at a time.

Language acquisition is the process by which humans acquire the capacity to perceive and comprehend language, as well as to produce and use words and sentences to communicate. Language acquisition is one of the quintessential human traits, because non-humans do not communicate by using language. Language acquisition usually refers to first-language acquisition, which studies infants ...

Siegmund et al (2014) were the first to empirically investigate the link between programming and other cognitive domains, such as language processing, at least using modern neuroimaging methods.

Questions and Answers – Max Planck Institute for

1. Adversity. In 2013, the United States reached an educational milestone. For the first time, a majority of the country's public school students – 51 percent of them, to be precise – fell below the federal government's threshold for being "low income," meaning they were eligible for a free or subsidized school lunch.
